Computer Network Trooper

– Best approach for Beginners

Mrs. Jayashree S Patil,
Associate Professor, Dept. of CSE,
G. Narayanamma Institute of Technology and Science, Shaikpet, Hyderabad.

Mrs. D. Naga Swetha,
Assistant Professor, Dept. of CSE,
G. Narayanamma Institute of Technology and Science, Shaikpet, Hyderabad.

PREFACE

The book can be used as a networks supplement or companion to other resources for a variety of other courses that overlap to some greater or lesser degree with networking. It is an alternative or nontraditional presentation of networking itself. It is when used in concert with other depicts in the world of networking textbooks, about **top-down** versus **bottom-up** sequencing. This book is not really either, although the chapters are mostly numbered in bottom-up fashion. Instead, the first chapter provides a relatively complete overview of the layers along with a few other things, allowing subsequent chapters to refer to all network layers without forward reference and more importantly, allowing the chapters to be covered in a variety of different orders. As a practical matter, Introduction to Computer Networks, the IP/routing and TCP material more or less in parallel been covered.

A distinctive feature of the book is the extensive coverage of TCP: TCP dynamics, newer versions of TCP. This has its roots in a longstanding goal to find better ways to present competition and congestion in the classroom. One thing this book makes little attempt to cover in detail is the application layer, the token example included is SNMP. While SNMP actually makes a pretty good example of a self-contained application, my recommendation to instructors who wish to cover more familiar examples is to combine this text with the appropriate application documentation.

TABLE OF CONTENTS

Title	Page No.
Chapter - 1:Data Communications, Overview of the Internet, Physical Layer	1
Data Communications-Components	2
Data Representation and its flow	3
Networks	6
Network Types	6
Internet history standards and administration.	10
Overview of the Internet: Protocol Layering	12
TCP/IP Protocol Suite	14
OSI Model.	19
Physical Layer: Data and Signals	23
Multiplexing	27
Spread Spectrum	33
Guided and Unguided transmission media	37
Chapter - 2: Data Link Layer, Mac Sub layer	46
Design issues	46
Framing	47
Error detection and Correction	50
Elementary Data Link Layer Protocols	57
Sliding window protocol.	61
Mac Sub layer: Channel Allocation Problem	69
Multiple Access Protocols	71
Classic Ethernet Physical Layer and Mac Sub layer Protocol	74
Ethernet Performance	75
Data Link Layer Switching	76
Chapter – 3: Network Layer, Routing Algorithms, Internet Control Protocols	80
Network Layer Services	81
Packet switching	83
Network Layer Performance	84
IPv4 addresses	84
Addressing	85
Forwarding of IP packets	90
Internet Protocol	91

IPv6 Protocol	94
Transition from IPv4 to IPv6	100
Routing Algorithms: Least Cost Routing	101
Distance vector Routing	104
Link State Routing	107
Hierarchical Routing	112
Internet Control Protocols: ARP	128
RARP	131
ICMP	132
DHCP	136
Chapter – 4: Transport Layer	138
Transport Layer Services	138
Transport Layer Protocols	142
Services and port numbers	156
User Datagram Protocol	160
Transmission Control Protocol	161
SCTP	163
Chapter – 5: Application Layer	169
DNS	170
E-MAIL	174
WWW	179
HTTP	182
FTP	187
TELNET	189
References	191
